TRANSFER PRICING AND IC-DISC PLANNING SEMINAR

Interested in learning more about transfer pricing?

Eager to save money via tax incentives?

Don't miss this seminar!

Why attend? US companies expanding overseas to sell their goods and services in foreign markets are subject not only to the US federal income tax rules that cover international transactions, but also to the taxing authorities of every foreign jurisdiction where they do business. It is imperative from the beginning to choose a structuring plan that fits your needs, keep costs low, and avoid the risk of double or even triple taxation in certain circumstances.

What is IC-DISC? An export incentive regime designed by Congress to promote the sales of domestically manufactured products for sale and consumption in foreign markets. The IC-DISC can be a powerful tool for any closely held US-based manufacturing business, as it provides the manufacturer with a highly competitive rate of taxation on the sales of finished goods in foreign markets – thereby significantly reducing the US-based manufacturer's cost of doing business.
